PROJECTS

E COMMERCE

The backend is designed by using nodejs express and the data base is mongo db client side is designed by using react. here the admins can add edit or delete product the product images is upload by using multer . And the user can order products . Add to cart is set by using redux. And we jenerating a jwt token for users and admins and we also set express validator for more secure the project

JOB PORTAL

Job portal for admin side frontend is design by next js and backend is worked by nodejs, express and mongodb. Here we can add update delete job and job category here the admin only can add and delete and update job and category. Here wow are using express validator for securing the data.

NYP DATA COLLECTION

Here the frontend is designed with help of flutter developer and the backend is designed by using node express and mongo db. which is a government project the admins can add and view all the student data in india like student name, collage, marklist, collage principal, exam data, etc... Here we add jwt token and using express validator for validating the input data. here we uploading students images by using multer and the admins can also update and delete the datas.
